

# Special Infrastructure Contributions (SIC)

- developer funding to help timely infrastructure delivery

## Frequently Asked Questions

November 2017

### Introduction

The Department of Planning and Environment is working towards creating well-connected, well-serviced communities to accommodate Sydney's growing population. The Special Infrastructure Contribution (SIC) framework is one of many initiatives in place to help ensure the demands of the growing population are met in a timely manner.

The proposed SIC framework will extend special contribution areas (SCAs) to all Planned Precincts and Growth Areas across Sydney identified by the Department of Planning and Environment.

### What is a Special Infrastructure Contribution (SIC)?

A Special Infrastructure Contribution is a levy paid by developers to share the cost of delivering the infrastructure required to support growing communities. The SIC funds infrastructure such as schools, state and regional roads, regional open space, emergency and health facilities, and some public transport infrastructure.

Contributions are collected for new developments within a defined boundary called the special contributions area. SICs are currently being prepared and proposed for all Planned Precincts and Growth Areas across Sydney.

The SIC is based on the Precinct Plan for the contribution area. The infrastructure schedule identifies the key pieces of infrastructure that can be delivered by SIC funding, and the levy is the per-dwelling or per-lot portion of the total infrastructure cost that must be paid by developers. For industrial development within contribution areas, a per net developable hectare levy will apply.

The Department will also consider development feasibility in setting a SIC charge so that the SIC will not impact housing supply.

### SICs and planned precincts

In February 2016, the NSW Government endorsed the investigation of Planned Precincts and Growth Areas across NSW as SCAs, where the cost of some of the state infrastructure for future development would be costed by the Government and shared with developers through a Special Infrastructure Contributions framework.

### Who is required to pay a SIC?

Anyone who is sub-dividing land or developing and delivering residential dwellings within a SCA will pay a Special Infrastructure Contribution to the State Government. SICs will also be charged for greenfield industrial development within special contribution areas.

## Frequently Asked Questions

November 2017

### Will there be any exemptions from SIC?

Exemptions are proposed for development of public housing, seniors housing or affordable housing carried out by or on behalf of a social housing provider. The contribution does not apply to employment or commercial land, except for development in mixed use zones where residential accommodation is provided.

### How is a SIC paid?

The SIC levy is paid by developers to the State Government during the development application (DA) process. Alternatively, developers may seek approval from the Minister for Planning to dedicate land or build a piece of required infrastructure instead of making a financial contribution. The delivery of infrastructure instead of a levy payment is known as a Works-in-Kind agreement.

### What does a SIC pay for?

Special Infrastructure Contributions help fund the delivery of some of the key pieces of infrastructure required to support a growing population identified in the Precinct Plan for the contribution area, including:

- state and regional roads;
- transport facilities such as bus shelters and interchanges;
- regional open space, pedestrian links and cycleways; and
- social infrastructure such as schools, healthcare and emergency services.

### What are the benefits of the SIC framework?

The SIC framework has many benefits for the community, landowners, developers and councils:

- provides certainty to the community that the infrastructure identified in the Precinct Plan will be funded and delivered;
- offers transparency about the collection and distribution of funds for required infrastructure;
- streamlines the planning process;
- ensures the timely delivery of infrastructure in line with community expectations and rate of growth;
- provides certainty for business, councils and community that infrastructure is funded and will be provided alongside or soon after new developments; and

## Frequently Asked Questions

November 2017

- enables industry to contribute funding towards infrastructure that provides a direct benefit to the community and adds value to the development.

### Why do we need to have a contribution?

The rezoning of land, particularly to higher density residential, means a significant increase in the demand for new and upgraded infrastructure to accommodate the increased density. A coordinated approach is essential for funding the delivery of new and upgraded infrastructure in time with population growth.

Landowners and developers who hold land prior to rezoning benefit from the increase in value resulting from the rezoning. It is fair and equitable that benefiting landowners and developers help fund the NSW Government to deliver key regional infrastructure.

### Will the community have the chance to have their say?

Before a SIC Determination, a draft will be on public exhibition on the Department of Planning and Environment website, including information on:

- the SIC levy amount;
- the method used to calculate the levy amount;
- the infrastructure schedule;
- timing and method of payment; and
- the developments for which contributions are required.

During the exhibition period, the Department of Planning and Environment will hear from the community, local councils and the development industry. All submissions will be considered and a consultation report will be provided to the Minister for Planning before a Determination is made.

You will be able to provide feedback or make a submission through the Department of Planning and Environment website.

### How is a SIC different to section 94 and section 94A contributions?

Section 94 and 94A contributions are separate and will not be affected by Special Infrastructure Contributions.

SICs fund state and regional infrastructure and may only be determined by the Minister for Planning. Section 94 and 94A contributions plans are made by local government authorities to assist them with funding local infrastructure items within a local government area.

Infrastructure contained in a local contributions plan will be different to that contained in a SIC infrastructure list.

## Frequently Asked Questions

November 2017

### How is the SIC determined?

The Ministerial Determination is the legal document that allows a Special Infrastructure Contribution to be levied on development within a contribution area under *The Environmental Planning and Assessment Act 1979*. An individual Determination must be made for each area where a SIC is proposed, signed by the Minister for Planning and published in the Government Gazette before it can be applied.

Once the Determination is made the Minister will issue a Direction to local councils to impose the contribution as a condition of consent on all residential development applications.
