Leader of the House in the Legislative Council

## MEDIA RELEASE

6 April, 2010

### POPULATION FORECASTS TO 2036

Many regional areas in NSW are projected to grow strongly over the next 25 years, according to population projections released today by the Keneally Government.

Minister for Planning, Tony Kelly, said the local areas with the strongest projected population growth are Queanbeyan (up 72%), Maitland (up 71%), Palerang (up 69%) and Tweed (up 59%).

“Other areas with strong growth are Yass Valley, Port Macquarie-Hastings, Eurobodalla, Coffs Harbour, Snowy River and Great Lakes,” the Minister said.

“It’s pleasing to see some of our inland and coastal areas are expected to experience strong growth, helping the State’s regional economy.

“Apart from regional centres, the projections also indicated strong population growth in western Sydney, central Sydney, coastal areas and areas to the north and east of Canberra.”

The figures are contained in a new local area population projections report, produced by the Department of Planning, which covers the period from 2006 to 2036. It presents population projections for both statistical local areas (SLAs) and local government areas (LGAs).

Mr Kelly said these figures are not NSW Government targets but projections based on an analysis of existing demographic trends and informed assumptions about expected future changes.

“These population projections enable all levels of government to know and plan for the challenges facing us over the next 25 years, be it to reverse decline in some rural areas or meet the needs of a booming population in high-growth areas,” the Minister said.

The report also reveals projections for areas covered by the NSW Government’s regional and subregional strategies, including:

- The greatest projected population growth in the Sydney metropolitan area is in the South West (increase of 113%), Sydney City (60%) and the North West (52%).
- The least growth is projected in Sydney’s South subregion (15%) and North East subregion (18%); and
- The greatest projected growth outside of Sydney is the South Coast (42%), Sydney-Canberra Corridor (42%) and Central Coast (39%).

Some of the more specific demographic changes expected to happen in NSW, include:

-2-

- An increase in the percentage of people aged 65 and above in every local area in NSW;
- Growth in the 0-14 year old population will be limited mostly to the metropolitan, coastal and areas surrounding Canberra; and
- Most local areas with small populations (those under 5,000 people) are projected to experience population decline, including those in remote parts of the State.

The population projections can be found at [www.planning.nsw.gov.au](http://www.planning.nsw.gov.au)

## **Background note:**

Population projections are calculated by examining a range of demographic trends from the Australian Bureau of Statistics, including resident populations and the underlying births, deaths and migration for an area. In metropolitan Sydney, statistics on housing and land availability – such as housing supply and average household size – are also taken into consideration.

The Department also consults with relevant State agencies and local government to discuss any factors which may potentially impact on an area's population.

Projections are then calculated by dividing the population into age and gender groups and projecting them into the future, taking into consideration how the above demographic events may affect each specific group over time.
