**Goulburn Mulwaree residents save time and money with Electronic Housing Code**

Lodging a fast track complying development application in Goulburn Mulwaree will be more convenient thanks to a Department of Planning and Environment program that enables people to apply any time from any location.

Goulburn Mulwaree Council has switched on the Department’s Electronic Housing Code, joining 115 other councils across the state.

The online system lets you lodge a complying development for a new home or home renovation.

A complying development is a straight-forward project that meets all the buildings standards, without the need for a development application.

The Electronic Housing Code means:

- Faster planning approval times for straight-forward home building or renovations
- No more paper applications or queues at councils with planning rules online, and applications can be submitted electronically 24 hours a day, seven days a week
- Conveniently-located and simple to understand information on what is allowed on a property without a development application.

“Home owners, builders, architects and other industry professionals are taking advantage of this tool all over NSW and it’s great that Goulburn Mulwaree Council is now on board,” a Department of Planning and Environment spokesperson said.

Goulburn Mulwaree Director Planning & Development Louise Wakefield said the Electronic Housing Code was a tremendous tool that offers a range of advantages the old paper system just can’t match.

“It’s a faster, easier way to get approval for certain types of development; including renovations, extensions, first floor additions and garages.

“You can also find out if some minor, low impact works such as cubby houses and carports can be done without any planning or building approval.

“This will reduce processing times and cut red tape,” Mrs Wakefield said.

Along with all councils participating in the Electronic Housing Code project, the Department worked closely with Goulburn Mulwaree to implement the system.
