

NSW Housing Pattern Book

MANOR HOMES 01 by Studio Johnston

An elegant design with garden apartments on the ground floor and airy, raked ceilings and generous balconies on the first floor

July 2025

GOVERNMENT ARCHITECT NEW SOUTH WALES

About this document

This document explains the specific requirements for the pattern called **'Manor Homes 01 by Studio Johnston'**. This pattern is part of the NSW Housing Pattern Book as referred to in the State Environmental Planning Policy (Exempt and Complying Development Codes) (Pattern Book Development Code) 2025.

The document provides an overview of what this pattern offers. It explains where housing based on this pattern can be located and how the design can be adjusted to suit user preferences and site requirements within the development standards defined for this pattern.

The technical drawings describe the pattern design in detail. Once you have selected a suitable pattern, you can download the CAD package for use by your architect or accredited designer to prepare your development application.

Using the pattern book

You are here:

Explore patterns and engage a designer Explore the patterns available on the NSW Housing Pattern Book and identify which ones might be suitable to your site and requirements. If you decide to proceed, engage an architect or building designer who will be able to support you through your pattern book development process.

2 Select a pattern and adapt it to your site and preferences

- Prepare drawings and information for a planning application

MANOR HOMES 01 by Studio Johnston

The architects designed:

A refined building to resemble a single elegant home containing 4 light and airy apartments

Each apartment to have outlook and landscaping on 3 sides, providing natural light and fresh air

Ground floor units with generous corner gardens

First floor units with wide balconies and raked ceilings to create a spacious interior

Well-designed apartment plans to efficiently maximise use of space

A stepped building form to provide a gentle scale and visual interest to the street

Brickwork and a simple sloped roof that are domestic in scale and low maintenance

Easy to live in

The pattern is designed to suit different household types including:

Young families – Private gardens and generous balconies are visible from living areas and the home office in the 3-bed plan suits flexible working

Single parent families – Living areas are spacious and 2 separate bathrooms are provided to suit teen and adult kids living at home

Ageing in place – Fully ground floor apartments are available with all apartments designed to meet Australian Building Codes Board Livable Housing Design Standard and can be adapted to Beyond Minimum Standard to support changing mobility needs

Co-living or share houses – 2 bathrooms, a separate laundry and good separation between bedrooms can suit share housing arrangements

First floor plan

Front view of the design from the street

Rear view from the car parking area

Not to scale

For everyone and every place

Will suit infill, corner or laneway sites

Best suited to north-facing rear yards, with designs optimising solar access for other orientations through courtyards, skylights, and flexible street-facing living spaces

Development type - Manor house or 2-storey residential flat

Permissibility – in low- and mid-rise housing areas and all other locations across NSW where this type of development is allowed with consent

Ownership – Suitable for strata title

No. of bedrooms - 2-bed or 3-bed options available

No. of dwellings - 4

No. of storeys -2

Base pattern: low- and mid-rise housing areas

Low-and mid-rise housing areas are locations where the Low and Mid-Rise Housing Policy applies. The pattern suits a minimum lot width of 15 m and minimum lot area of 625 m².

Base pattern: sites outside low- and mid-rise housing areas

Sites outside low- and mid-rise housing areas are all other locations across NSW where this type of development is permitted with consent. They are referred to in the patterns as non-low-and mid-rise housing areas. Suits a minimum lot width of 18 m and minimum lot area of 840 m².

Not to scale

Sustainable and energy efficient

Passive solar design ensures comfortable living spaces and lower energy bills

Daylight and natural ventilation are provided throughout including windows on 3 sides of living areas

The large roof area is suitable for solar panels

Sun shading and rain protection are provided to windows and doors

Careful control of extent of glass maximises light and thermal comfort while minimising cost

The simple Class 2 construction and stacked services are suited to prefabricated and standardised elements to reduce cost and construction waste

The external materials have longevity for an enduring and high-quality home

The rainwater tank captures roof water for reuse

Ceiling fans improve air circulation,

All-electric homes provide healthier indoor environment, lower energy

modular wet areas and service stacks

energy efficiency and thermal comfort

bills, and reduced carbon footprint

Smart and flexible

Options for mix of 2-bed and 3-bed apartments depending on site length

Car parking at front or rear depending on site depth

The site can slope 4 m front to back or 3.3 m side to side depending on site width and depth

Choice of external materials colours

Select 1

2-bed unit Australian Building **Codes Board Livable** Housing Design Standard

Select 2

2-bed unit Australian Building **Codes Board** Livable Housing **Design Standard Beyond Minimum**

Select 3

All dwellings are serviced by a deep balcony or covered outdoor space suitable for entertaining and dining

Open-plan living area and kitchen

MANOR HOMES 01 by Studio Johnston

Requirements and adaptations

Planning overview

Where the pattern book applies

The Low and Mid-Rise Housing Policy (the LMR Policy) aims to encourage new housing in well-located areas. The LMR Policy applies in particular well-located residential zones within 800 m walk of town centres and stations across NSW. These are known as LMR housing areas.

A base pattern for LMR housing areas

A version of each pattern design, or 'base pattern'. has been created for low-and midrise housing areas (LMR housing area). These have different planning controls reflecting the well-located and connected sites.

A base pattern for sites outside LMR housing areas

Sites outside low-and mid-rise housing areas (referred to in the pattern book as non-LMR housing areas) are all other locations throughout NSW where these development types are permitted. These base patterns reflect different planning requirements in these areas, such as additional parking.

Fast-tracked planning pathways for pattern book developments

Pattern book developments are eligible for fast-tracked planning approval. The Pattern Book Development Code 2025 enables pattern book developments to be approved as complying development. An accelerated 10-day approval timeframe applies to pattern book complying development certificates, compared with 20 days for standard residential complying development.

Excluded land

Like other forms of complying development, pattern book complying development will not be permitted on high-risk or other constrained land such as bushfire-prone and certain floodprone land. To understand the full list of exclusions, refer to the policy in the State Environmental Planning Policy (Exempt and Complying Development Codes) 2008 (the 'Codes SEPP'). If the land is excluded from complying development, pattern book development can be proposed through the standard development application pathway.

Design verification statement

Pattern book development approval requires a complying development certificate (CDC) in accordance with part 3BA of the Codes SEPP (as required by section 131A of the Environmental Planning and Assessment Regulation 2021).

To obtain the CDC, the development application must include a written statement from either an architect or accredited designer. The design verification statement must confirm the proposed development will comply with the development standards, site requirements, pre-defined options, technical drawing set and technical information specified in the NSW Housing Pattern Book for the type of development proposed. The architect or accredited designer must confirm that all fixed and adaptable design features required by the pattern are evident in the submitted development proposal.

The statement will help assessors to determine whether a proposed development complies with the original pattern design intent and is eligible to be considered pattern book development.

Accredited designer

The design verification statement must be completed by an accredited designer or architect. They must include their professional registration in the statement.

Note to assessors

To be considered pattern book development, it is essential that a proposed development meets its planning obligations. This includes complying with development standards, consistency with the pattern, permissibility, and completion of the design verification statement by an architect or accredited designer. The assessor should ensure these obligations have been met.

Design integrity

The design integrity of the pattern must be reflected in the submitted design. The submitted design should not be modified beyond the described adaptable features.

Landscape

Pattern book developments must show how they have considered the NSW Housing Pattern Book Landscape Guide which provides advice on creating a landscape plan for the patterns. This includes tree canopy and deep soil requirements, in accordance with the NSW Government Tree Canopy Guide for Low and Mid Rise Housing, for different building types. It also includes suggested planting lists.

Heritage

Pattern book developments via the complying development pathway are not permitted in heritage conservation areas (HCAs) or on heritage sites.

Pattern book development applications within heritage conservation areas need to follow a standard development application process.

Privacv

Privacy has been addressed within the pattern designs; solutions include providing fixed and optional screening.

Sustainability

Pattern book developments must achieve BASIX targets and compliance. Each pattern includes guidance on how to achieve the BASIX requirements, along with optional sustainability features such as solar panels and upgraded performance features an applicant may choose to incorporate in their development.

Solar access and overshadowing

All pattern book developments need to demonstrate that reasonable solar access (as defined in the Low Rise Housing Diversity Design Guide*) is provided to the living rooms and private open spaces of adjoining dwellings.

*A window that is more than 3 m from the boundary to a living room of an adjoining dwelling is to receive more than 3 hours of direct sunlight between 9 am and 3 pm on the winter solstice (June 21). If the window currently receives less than 3 hours, direct sunlight is not reduced.

Development standards and planning information for Manor Homes 01 by Studio Johnston

Developments applying this design from the pattern book must adhere to the planning requirements specified below in order to be eligible for the pattern book fast-tracked planning pathways.

Type of development – manor house

- Permitted where manor houses are currently permitted with consent across NSW
- 4 dwellings
- Suitable for strata title

Building class

– Class 1a

Pattern adaptation

This design includes fixed and adaptable features which are outlined in this section of this document, and detailed in the technical drawings section of this document. The adaptable features have pre-defined options that must not be modified beyond those designs. The design verification statement must clarify which adaptations and options have been selected for the proposed pattern book development and that the adaptations meet the provided guidance and original design intent.

Pattern-specific adaptation criteria

Site slope

The building can be adapted to suit gently sloping sites as shown in the technical drawings. This pattern accommodates internal stairs and adjustments of up to 2.5 m front to back, and 2.1 m side to side.

Associated earthworks for the site are permitted in accordance with 3BA.7 of the Codes SEPP.

Development standards

The below development standards are specific to Manor Homes 01 by Studio Johnston. They apply where this pattern is proposed as pattern book complying development under State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.

	LMR housing areas	Non-LMR housing areas
Minimum lot size	625 m ² min	840 m ² min (must also meet relevant LEP minimum lot size for this development type)
Minimum lot width	15 m min	18 m min
Maximum building height	As defined by LMR reforms (9.5 m max.)	(8.5 m max.)
Maximum floor space ratio	As defined by LMR reforms (0.8:1 max.)	0.5:1 max.
Minimum front setback	9.5 m min	5 m min
		Or, not less than the average setback from the primary road of the nearest 2 dwelling houses within 40 m of the lot and on the same side of the primary road, whichever is greater
Minimum side setbacks	1.5 m min	1.5 m min
Minimum rear setback	6 m min	15.4 m min
Minimum secondary street setback	3.0 m min	3.0 m min
Articulation zone	The pattern includes an articulation zone at the front and rear which extends 1.95 m into the front and rear setbacks	The pattern includes an articulation zone at the front and rear which extends 1.95 m into the front and rear setbacks
Minimum landscaped area	15%	15%
Minimum off-street parking spaces per dwelling	As defined by LMR reforms (A minimum of 0.5 car parking spaces per dwelling)	A minimum of 1 car parking space per dwelling

Notes on development standards

Minimum lot size and adaptations	The minimum lot size represents the base pattern design for a mid-block site with optimum orientation. The pattern adaptation pages included in <u>requirements and</u> <u>adaptations pages</u> along with <u>technical drawings section</u> provide guidance on adapting the base plan for different site positions (mid-block, corner, laneway), orientations and inclusions.
Minimum lot width	The minimum lot width is measured at the front building line.
Floor space ratio	The planning table shows the maximum possible FSR for the pattern when selecting all adaptations and options. The base patterns FSR as shown are: - LMR housing area 0.6:1 FSR - Non-LMR housing area 0.5:1 FSR
Height	The base pattern height as drawn is 7.6 m. The maximum building height in the development standards (left) allows for adaptation to slope on the subject site.
Parking provision	Parking is provided in the front hardstand for LMR areas, and in rear car parks for non-LMR areas. Refer to <u>requirements and adaptation</u> <u>section</u> for additional options.

4 x 2-bed unit 1.

LMR: 15 m min width x 41.6 m min length A-324 Non-LMR: 18 m min width x 46.55 m min length

5. 4 x 3-bed unit

LMR: 15 m min width x 47 m min length A-326 Non-LMR: 18 m min width x 51.95 m min length

Pattern adaptations

Dwellings (LMR and non-LMR base patterns)

These diagrams demonstrate the dwelling combinations available for this pattern.

These should be read in combination with the LMR housing area and non-LMR housing area siting and orientation guidance to determine the most suitable combinations and approach for your specific site.

> 2-bed unit (silver) 2-bed unit (gold) 3-bed unit (silver)

 $(\mathbf{\Gamma})$

Location requirements

Siting and orientation adaptations (LMR base pattern)

These plans demonstrate siting and orientation principles for this pattern in the **LMR housing areas**, adapting to suit midblock, corner, and rear-lane lots.

Pattern sites must:

- meet minimum lot width and areas
- meet minimum setbacks and landscape areas. Refer to the planning pages of this document for further detail.
- have driveways located a min 6 m from intersections. Confirm with local authorities if additional rules apply.

The examples also show the siting response to orientation. Analyse the drawing to find the most relevant example for your site, which shows recommended siting, driveway locations and opportunities to adjust for orientation.

Using this guidance, refer to the LMR site **plan** to begin adaptation to your site, and to the slope adaptation pages for topography.

2-bed unit (silver)2-bed unit (gold)3-bed unit (silver)

Location requirements

Siting and orientation adaptations (Non-LMR base pattern)

These plans demonstrate siting and orientation principles for this pattern in the **non-LMR housing areas**, adapting to suit mid-block, corner, and rear-lane lots.

Pattern sites must:

- meet minimum lot width and areas
- meet minimum setbacks and landscape areas. Refer to the planning pages of this document for further detail.
- have driveways be located a min 6 m from intersections. Confirm with local authorities if additional rules apply.

The examples also shows the siting response to orientation. Analyse the drawing to find the most relevant example for your site, which shows recommended siting, driveway locations and opportunities to adjust for orientation.

Using this guidance, refer to the **non– LMR site plan** to begin adaptation to your site, and to the slope adaptation pages for topography.

Pattern adaptations

Material selections

The patterns are available in a variety of material finishes, allowing flexibility to suit both user preferences and the unique character of each location. When selecting a material palette from these options, consider how it complements the existing streetscape.

Refer to the technical documentation for further detail on materials.

Pattern selections template

Using this guide, site owners and designers can map how this housing pattern will be adapted to suit the specific site and meet the needs of the future occupants.

Completing this page will:

- enable you to confirm the site meets the location type, minimum frontage and area requirements of this pattern
- consider the dwelling mix and inclusions of each dwelling
- review the lot features such as orientation and slope to inform which pattern adaptations need to be used
- consider the material palette and character options available
- allow the designer, builder or cost planner to prepare the project-specific drawing set and begin feasibility costings.

Confirm lot size and lot width meets minimum area for site location. Range of applicable lot sizes: 500 m ²
-850 m².

Instructions for designers

Preparing your submission for approvals

The drawings and designs provided in the pattern have been completed to a development application level of resolution to fast-track the preparation of application plans and documents specific to your site. Note that applications for pattern book projects, as complying development via the Pattern Book Development Code 2025, will require development of further documentation as required for certification as complying development.

Guided by the pattern drawings and information, consider the design features and inclusions, along with the adaptations required to use the pattern on the subject site.

In addition to the information in this pattern package, a licensed package is available for purchase. This includes further technical information in PDF and DWG format. This will enable the designer to adapt the pattern to your site-specific design for the preparation of your planning application.

The table on this page lists typical inclusions for development applications and notes which are included in the pattern package. Proponents and designers will need to confirm all application requirements specific to their site and chosen planning pathway.

that may be applicable to

authority to confirm

your project.

Units and measurement

The pattern designs have been drafted to standard drawing scales. Site measurements are generally identified as minimum, allowing users to adjust the pattern to the specific site shape and size. Should discrepancies exist, refer to the development standards table. Measurements for sites have been rounded to the nearest 0.1 m, while areas have been rounded up or down to the nearest 5 m².

NCC compliance

The low-rise pattern designs offered in the NSW Housing Pattern Book are capable of compliance with the National Construction Code (NCC) 2022 subject to final technical specifications and details.

The semi-detached, terrace and multidwelling patterns are Class 1a buildings. The manor house is defined as a Class 2 building. Additional compliance measures and reporting are required for Class 2 under the Design and Building Practitioners Act 2020. For this type of development the proponent is required to engage a practitioner registered with the NSW Design and Building Practitioners (DBP) scheme.

Universal design

Low-rise pattern book dwellings must comply with the Australian Building Codes Board (ABCB) Livable Housing Design Standard, which has been adapted from the 'silver' level requirements of the Livable Housing Association (LHA) Livable Housing Design Guidelines. Several of the patterns include options for adapting one or all of the dwellings in the development to achieve the ABCB 'voluntary standard' ('beyond minimum') set out in the ABCB Voluntary Standard for Livable Housing Design: Beyond Minimum. The ABCB voluntary standard has been adapted from the LHA 'gold' level requirements.

For details of differences between Class 1a and 2 requirements, examples and exemptions refer to the ABCB Livable Housing Design Handbook

Site slope

The pattern designs can be modified to suit gently sloping sites. The scope for this is documented in the pattern plans and sections.

As patterns are adjusted to meet the specific site conditions, design considerations include:

- maintaining paths of travel to front doors according to the ABCB Livable Housing Design Standard
- potential for and locations of retaining walls. Refer to the complying development conditions for permitted excavation and retaining walls
- stormwater management and drainage systems.

Driveways and driveway crossings

The location of the driveway and driveway crossing is shown on the plans. Proponents must ensure the design meets the requirements of Australian Standard AS 2890.1:2004 Parking facilities, Part 1: Offstreet car parking.

AS 2890.1 prescribes sight lines for pedestrian safety, to maintain clear visibility for drivers leaving a car space and for pedestrians on a nearby footpath. The design needs to ensure:

- the pedestrian sight line for the driveway fits wholly on the site and can be kept clear of obstructions over 800 mm in height. or
- if not able to sit wholly within the site, the fencing and any landscape constructions are kept below 800 mm height for the zone. In some instances this may require agreement with neighbouring parties.

Driveways should not be affected by existing structures such as street trees, earth mounds, bus shelters, power poles and other physical features. Removal of such features may be permitted subject to council approval.

All driveways should be permeable to reduce stormwater runoff. To meet the requirements of the ABCB Livable Housing Design Standard driveways must be step free.

Construction systems and materials

The construction system for the pattern designs provides efficient and coordinated planning, aligning load paths, wet areas and service risers where practical. Specific materials have been selected for the external elevations and character as shown on the materials pages.

Generally, the pattern assumes the buildings conditions. have slab-on-ground concrete slab at ground level and timber framing for walls, upper floors and roofs. Tolerances are included within the designs presented to allow proponents to adjust the floor, wall and roof systems to suit their own desired methodology. Each pattern user will need to review this in preparing the construction documentation with their designer, builder and cost planner.

Where possible spans across rooms and openings have been strategically considered to allow for standard framing techniques and limit the use of steel, subject to the specific project's structural engineer's design.

Party walls are generally assumed to be masonry, however there is allowance to accommodate a number of available party wall systems. The project team will need to select the party wall system to meet the fire and acoustic requirements of the NCC, as well as their BASIX and thermal certification.

Note that the manor house design is NCC Class 2 construction and has additional fire and compliance requirements that need to be met. Work with your accredited DBP practitioner and certifier to achieve compliance.

Waste bins

The preferred location for bin storage is shown on the plans allowing 3 x standard 240 L bins for waste, recycling, and FOGO (food organics and garden organics).

In some locations, councils may allow smaller 120 L bins. This needs to be confirmed for the local area.

Space for kerbside waste collection has been considered in the pattern design (based on a NSW-wide review of kerbside waste collection). Applicants need to review whether this is suitable for the specific site

Services provision

The pattern designs have had early consideration of services and integrating service spaces into the designs. Below is a description of the service provisions and assumptions of the pattern designs.

Electrical

All dwellings are to be fully electric.

Allowance has been made for heat pump hot water units.

Provision for meter boards and distribution boards is shown on the servicing page. Side gates should be located so meter panels can be accessed from outside the gate.

All patterns allow for photovoltaic solar panel installation to roof areas with allowance made for inverter installation near the meter board. This will need to be coordinated with any other toilet vents, pipes or roof access equipment.

A 15-amp outlet will be required in the garage for potential electric vehicle (EV) charging.

NBN

Consideration has been made for National Broadband Network (NBN) connection to the dwellings, subject to service provider availability. Refer to the services diagram for further detail and proposed location of the NBN premises connection device.

Water and hydraulic services

Rainwater tanks have been incorporated into the designs as shown. At a minimum these are to be used for landscape watering. however they can also be connected to toilets and the cold tap of washing machines. For further detail refer to the BASIX guidance and confirm alignment with the commitments on the BASIX certificate.

Water meters are to be provided for the dwelling in accordance with water authority requirements.

Civil and stormwater

The design of stormwater systems is site specific, and subject to location, slope and ground conditions. Applicants will need to engage a suitably qualified engineer to confirm the stormwater system design and layout.

The pattern designs include suggested location for on-site detention (OSD) areas, along with details of downpipes, rainwater collection, and drainage for paved or concreted areas.

Mechanical

The ability to accommodate air-conditioning systems has been reviewed for the patterns. Pattern applicants will need to assess the requirements for integrated or wall-mounted units, along with the BASIX commitments.
