

Bulga Coal Community Consultative Committee

Annual Report – 2022

CCC/Project Name:	Bulga Coal Community Consultative Committee	Reporting Period:	Annual 2022
Independent Chairperson:	John Turner	Proponent Contact:	Ralph Northey

1. Executive Summary

The Bulga Coal Community Consultative Committee (CCC) is an excellent functioning committee with good interaction between CCC members and the company.

Dust remains a dominant topic of discussion, however, following the extreme wet weather conditions during 2022 was not as dominant as previously.

The CCC fully engages with the company on many issues and the company is forthright in addressing the CCC's enquiries and, when necessary, follows-up on issues and reports before or during the next meeting.

2. CCC Activities of Last 12 Months

The meetings have been well attended.

The meetings are presented with an abundance of information and the CCC committee members introduce matters of concern from their particular areas as well as generally.

There were no joint CCC meetings held.

3. Key Issues

Issue	Action Taken	Next Steps
Dust	It is acknowledged that dust is a cumulative problem with the configuration of mines in the area. The company has undertaken additional analyses to better assess where dust is coming from and from which mine.	Continued monitoring will occur.

4. Focus for Next 12 Months

There will be the two meetings in the current year.

Information dissemination is a vital role for the CCC and the company. The company has regular community events to facilitate this activity.
